

## Technical Specification

## Description

The Cavity Master is a precision engineered tool manufactured from high quality materials. The blade is easily replaced and the tungsten carbide rebate cutters are good for many years of service.

The Cavity Master should only be used in conjunction with a 600W or higher rated drill at a medium to fast speed setting. The drill should also feature a side handle.

The 2mm rebate should be covered with the purpose designed closure plate and silicone sealant. Alternatives include a ventilation plate or plasterboard mesh, both made to measure the Cavity Master access hole.

## Technical Details

Components:	1 Cavity Master 1 Arbour and drill 4 cover plates
Options:	Closure plates (Pack of 5) Plasterboard mesh (Pack of 5) Ventilation plate - Brass - Stainless Steel
Weight:	1172g
Size:	126mm x 123mm
Hole diameter:	102mm
