

Converting a DDXXXMS & DME0XXMS into a Dual tier incomer board using the Defender Linking Kit DCA25

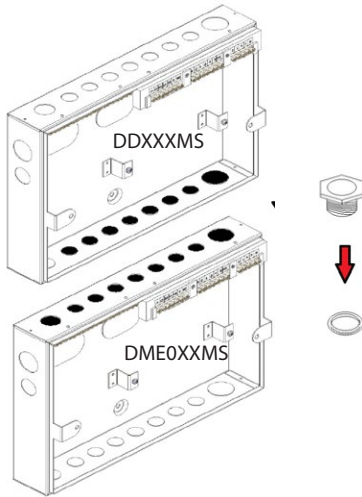

Fig 1.

Remove the corresponding knockouts from both units and using the interconnect glands supplied, fix the two units together ensuring the lock rings are tightened correctly.

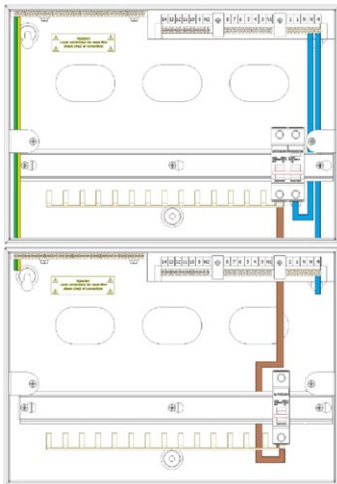

Fig 2.

Check and confirm the two units complete wiring is correct as per Fig 2. Ensuring all connections are tightened to the correct torque.

*Note The live link cable for the lower tier is inserted into the first circuit protection device with the Busbar.
