

So Easy to Fix

Cutting Guide

Selected D-Line accessories

Cutting block for use with D-Line lengths

1. Measure length required. Hold cutting-guide over D-Line and cut where necessary using a Tenon Saw or Hacksaw with a fine-tooth blade.
2. Use the cutting block to check that end is straight and then use same block as a filing guide to file, as necessary, to perfect the finish.

3. For easier installation we advise horizontal runs (incl. quarter sphere D-Line) are all fixed with clip-opening at top, and elastomer hinge at base.

4. Align D-Line and either fix using self-adhesive option, or push open near the point of clip opening and drill-fix to surface as required. If using self-adhesive option please be advised a strong bond will be achieved with the surface. We advise that before removing the strip-cover ensure the surface is clearly marked to ensure a straight alignment will be achieved.
