## CONTENTS

DVR Description.....	3
System Connection Diagram.....	4
System Operations.....	5
Record Setup.....	12
Menu Layout.....	17
Remote Viewing.....	18
Support Guide.....	19

This manual is designed to be used as a quick start guide alongside the informative general user interface (GUI) of the DVR. The menu above is not exhaustive and is designed to lead the user quickly to the most often required aspects of the unit.

**The DVR will require a connection to a monitor to be programmed.**

### IMPORTANT NOTICE

- **Please read this manual** and keep for later use
- Do not use accessory devices not recommended by the manufacturer
- Please use the power adapter equipped for the unit
- Please do not touch any control parts not mentioned in the manual. Incorrect adjustment of a control part not mentioned in the manual may damage the machine
- Ensure air ventilation around the unit and do not cover or block the vent hole
- Do not place the unit in direct sunlight or near a heat source

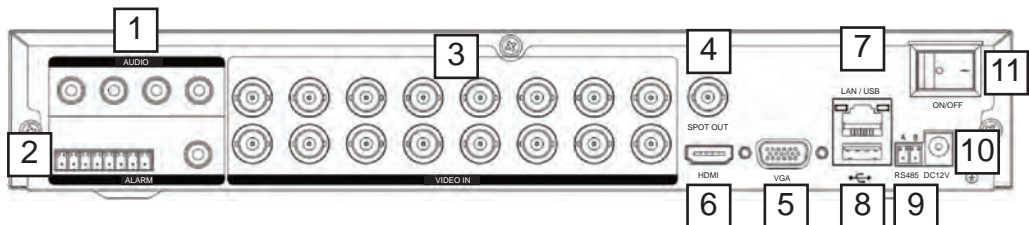

## DVR DESCRIPTION

### FRONT PANEL

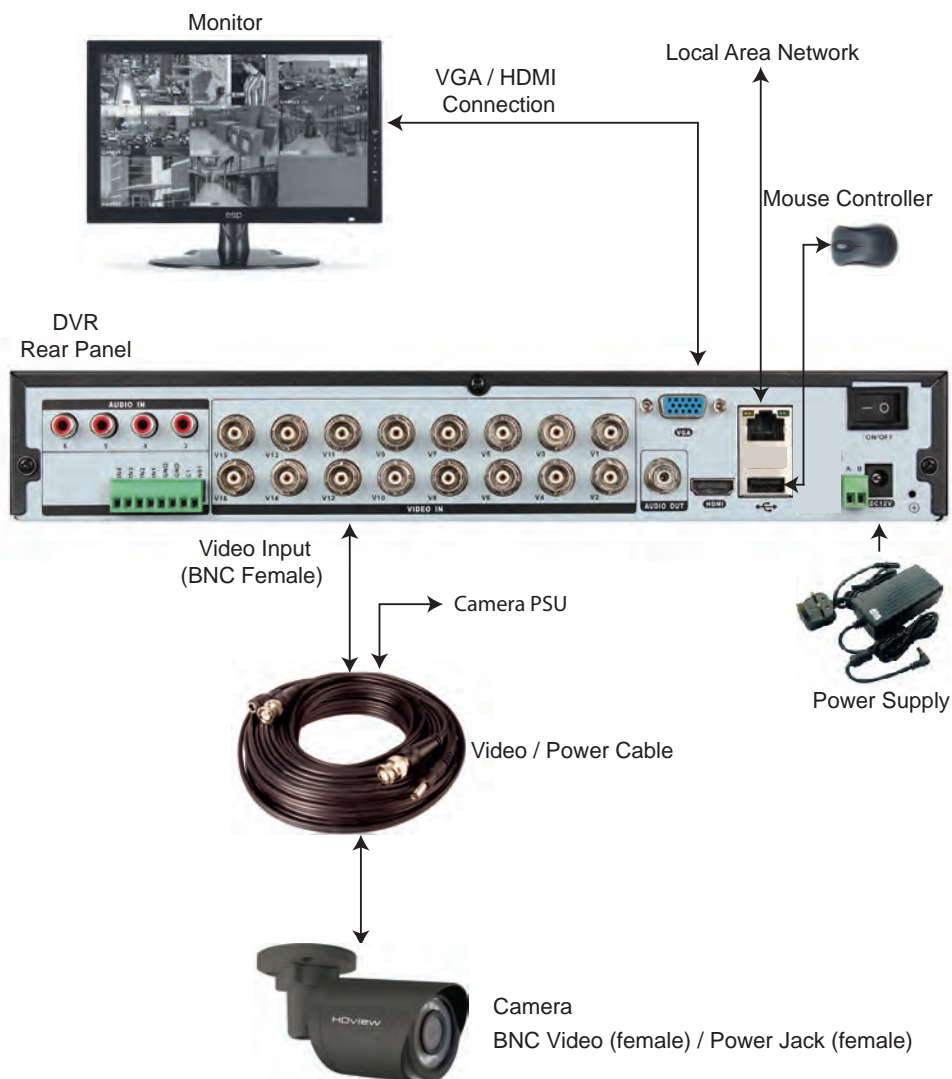

1. USB      Port for mouse control/ USB stick

### REAR PANEL

- |             |                                    |
|-------------|------------------------------------|
| 1. AUDIO    | Audio in & output                  |

| 7. LAN      | Network port                       |
| 8. USB      | Port for mouse control/ USB stick  |
| 9. RS485    | Signal control (PTZ etc.)          |
| 10. DC12V   | Power input for DVR                |
| 11. POWER   | On/Off switch for system           |

## DVR CONNECTION DIAGRAM

NB. The Video & Power connectors are not weatherproof. Please ensure the connections are made internally, or housed in a suitable enclosure.

### Notes on Camera Connection:

Review the camera/ cable connections before installation.

The DVR is specifically designed for ESP's High Definition cameras using AHD technology.

The DVR can also support standard definition cameras.

## SYSTEM OPERATIONS

### CONNECTION TO A MONITOR

Use either HDMI or VGA output to connect to a monitor and select the correct input channel on the monitor.

Once initial set-up of the system is complete, adjust the resolution from the system's 'Display' menu to suit the monitor's resolution.

(Shortcut menu> Output Adjust)

### CONNECTION TO A ROUTER

If remote reviewing is required from a smart-phone or PC, please connect the DVR to the router using a network cable. During power up the DVR will obtain the necessary network details.

### POWER ON

Plug one lead from the 5-way power supply into the 12VDC power supply input marked on the DVR. Turn on the DVR at the mains power point. The Power supply indicator light will illuminate on the DVR's front panel followed by several short bleeps.

### POWER OFF

Select Logout from the Shortcut menu and turn off the DVR at the mains power source.

**N.B Auto resume after power failure. If the DVR is shut down abnormally, the DVR will automatically backup video and resume previous working status after the power is restored.**

### MOUSE CONTROLLER

In order to prevent un-authorised tampering majority of DVR functions of are controlled via the mouse controller.

## START-UP WIZARD

The **Set-up Wizard** takes the user through basic system settings. More advance options and settings are found in the **Main Menu**.

### INTRODUCTION

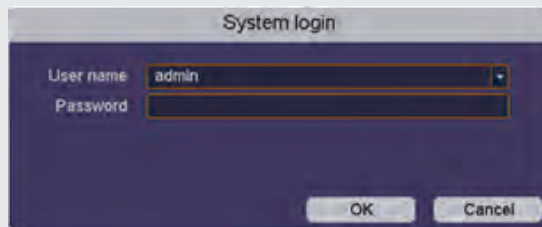

### LOG-IN

An opportunity to change the password is provided within the **Main Menu**. The default settings are:

**User Name: admin**

**Password: 'leave blank, there is no default password'**

## GENERAL

Set time and date:

The screenshot shows the 'General' settings window. It contains the following fields and controls:

- Language: English
- Time zone: [GMT+08:00]
- System time: 2016 - 08 - 02 17 : 44 : 13
- Date separator: -
- Date format: yyyy mm dd
- Time format: 24-Hour
- DST: Set
- Auto logout: 10 min
- Startup wizard: ☒
- Device No.: 8
- Host name: LocalHost

At the bottom, there are four buttons: Default, Prev step, Next step, and Exit.

## RECORD CONTROL

As default the system is set to record continuously on all channels on every day of the week.

The system automatically overwrites the HDD (Storage Device), so no additional recording set-up should be required.

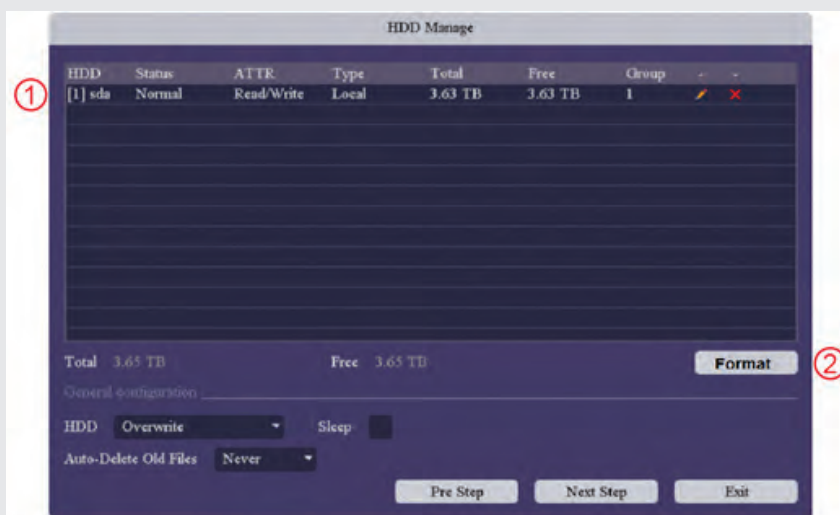

The screenshot shows the 'Control' window for recording control. It features a grid for setting recording schedules for seven days of the week (Sun to Sat). The columns represent hours from 0 to 24. The rows represent the days of the week. A legend on the right indicates three recording modes: Norm. (green), MD (yellow), and Alarm (red). Each cell in the grid can be clicked to toggle between these modes. There are 'Edit' and 'Default' buttons on the right. At the bottom, there are buttons for Default, Copy to, Prev step, Next step, and Exit.

This page displays the capacity of storage for the HDD. To ensure full use of the HDD please format before 1st use;

- 1) Select the HDD with the mouse control
- 2) Click **Format** and select **OK** on the prompt

## Network

The Network page displays the advanced settings for users wanting to manually enter network details.

If DHCP has been enabled the network settings will apply automatically during power up of the DVR.

## CLOUD CONNECTION

The Cloud service makes remote viewing via smart phone simpler. If the status on the menu states 'Connected', scan the applicable QR to obtain the APP and ID address. For additional instruction, please refer to the supplied 'Remote Viewing Guide'.

## LIVE VIEWING

On start up the DVR will display a divided screen. Using the Mouse Control, double click on any image to bring to full screen. Double click again to return to that main divided screen.

The recording status and alarm status are indicated by the following icons:

Recording

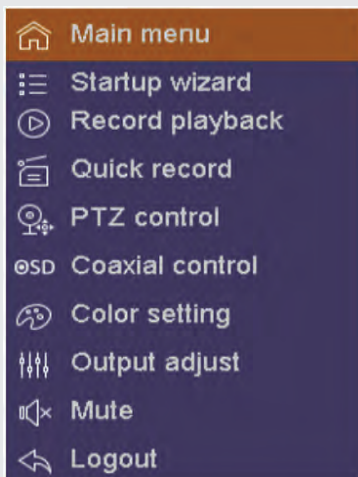

Motion Detect

## SHORTCUT MENU

Right-clicking on the live camera screen will activate the **Shortcut Menu** where the most regularly used settings can be found.

### Main Menu

Enter to adjust all system settings

### Start-up Wizard

Enter to adjust initial system settings

### Record Playback

Shortcut for Record Control

### Quick Record

To view recorded files

### PTZ Control Settings

Control for configured PTZ camera

### Coaxial Control

Access a camera's on screen menu

### Colour Settings

Edit colour settings per channel

### Output Adjust

Alter system monitor output settings

### Logout

Log-out, Shutdown or Reboot system

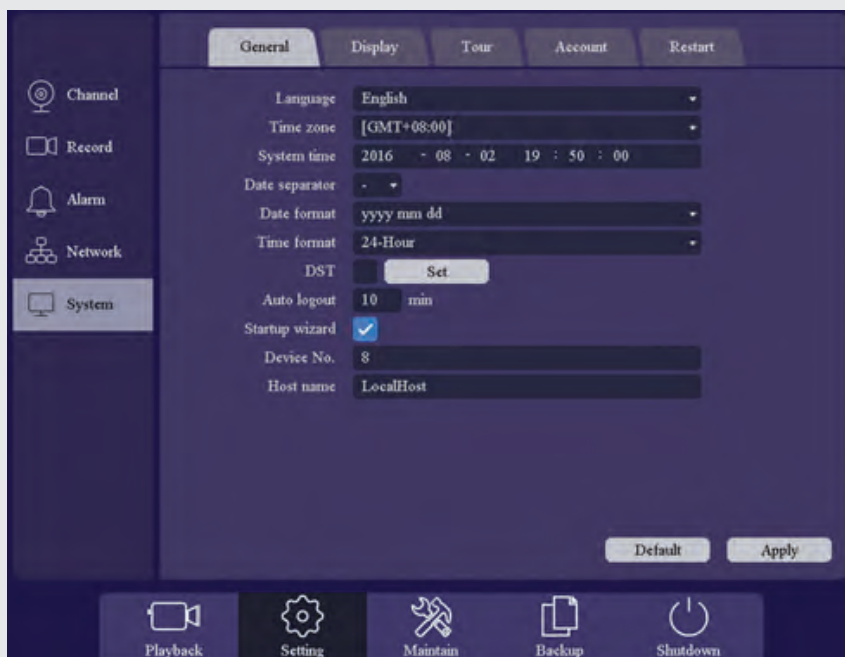

## ACCESSING THE MAIN MENU

Right click the mouse controller anywhere on screen to activate the **Shortcut Menu**.

Selecting **Main Menu** option will automatically display the following screen;

To exit from the **Main Menu** at any point Right-Click on the mouse controller.

## RECORD SETUP

### Continuous Record

As factory set, the unit is programmed to record all channels continuously. The HDD will overwrite once full to ensure smooth operation.

### Motion Detection Record

Right-click on the live screen to bring-up the **Shortcut Menu** and selecting **Main Menu** to log-in.

From the **Setting** menu Select **Record**:

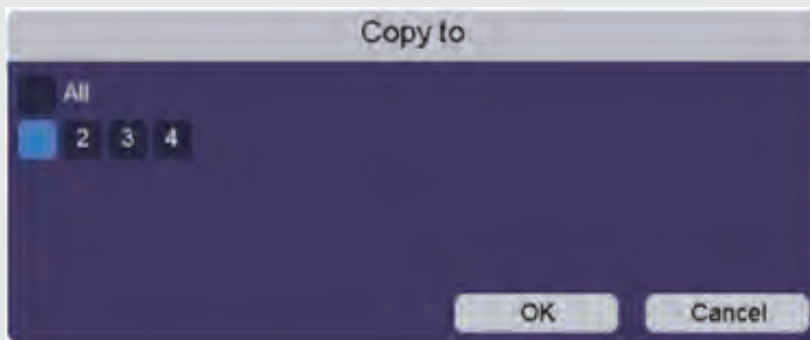

- 1) Click inside the box for **Norm.** to select the continuous record mode
- 2) Click on the eraser from Sunday to Saturday, this will remove the default continuous record function. The schedule should match the example graphic.

- 3) Select **Copy to**;

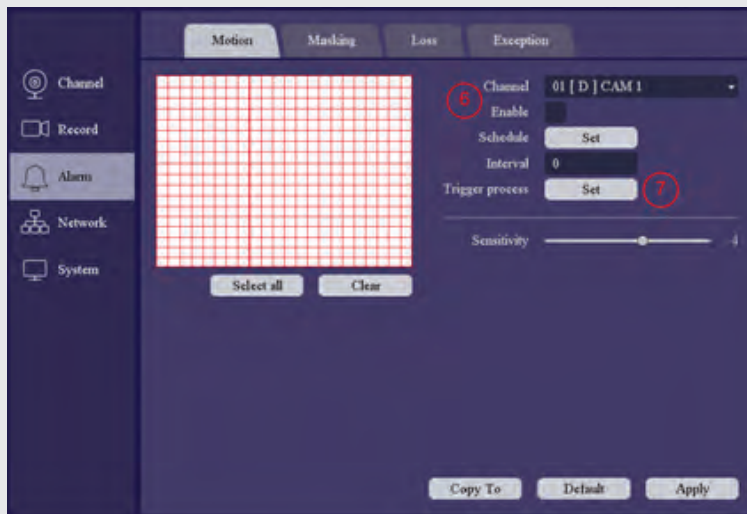

Highlight which channels are to be triggered by Motion Detection and select OK.

- 4) Returning back to the Record screen Select **Apply**  
5) Then select **Alarm**

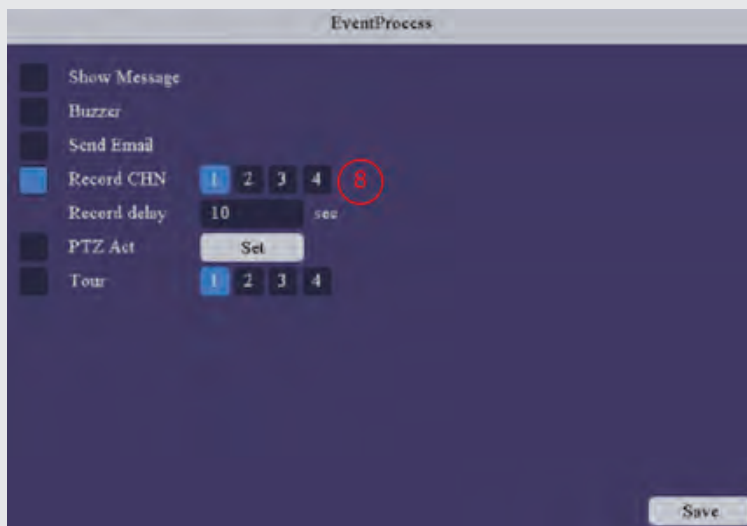

- 6) Select applicable channel and then select Enable
- 7) Select Trigger process

- 8) Enable **Record CHN** and highlight which channels are to record and select **Save**

## RECORD PLAYBACK

Right click on the live camera view and select **Record Playback** directly from the **Shortcut Menu**.

On the playback menu refer to the right hand side of the screen and enter the following;

Normal Playback Operation;

- 1) Select **Normal Play**
- 2) Select which Cameras to play back, select Month and Day from the calendar
- 3) Select play and use the curser on the timeline to view required footage.

Event Playback Operation ( Motion Detection) ;

- 1) Select **Event Play**
- 2) Select which Cameras to play back, enter Begin and End time and select Search
- 3) Double click on the required time from the list for required playback

NB. Practice playing back footage to familiarize with the process before an incident occurs.

NB. For best performance it is recommended that only one channel at a time is selected for playback.

## COPY RECORDING TO USB

Insert USB stick into the DVR, Right click on the live camera view and select **Main Menu** from the **Shortcut Menu**.

- 1) Select **Backup**
- 2) Select which **Channel** is required
- 3) Select required **Start and End Time** for the footage, also set the **File Format** to ; **AVI**
- 4) Select **Search** and the required files will be confirmed and finally select **Start** to begin backup process

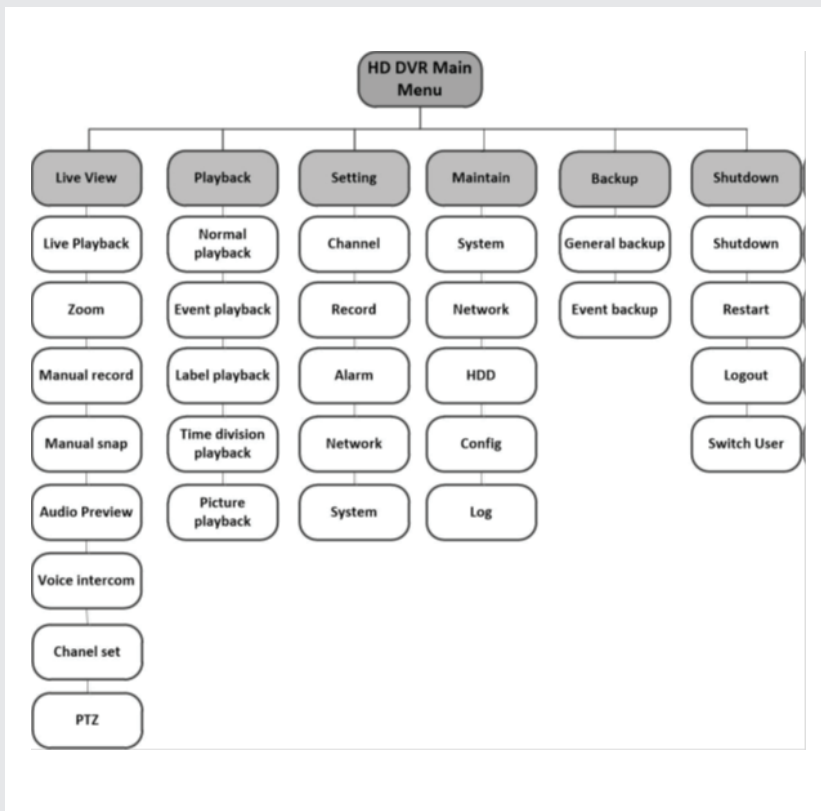

NB. Practice backing-up footage to familiarize yourself with the process before an incident occurs.

NB. The AVI file will enable playback via a PC using AVI players

## MENU LAYOUT

## REMOTE VIEWING

Networking should always be carried out by a competent/qualified engineer, specifically when adjusting settings on the router which is sometimes required for remote viewing.

To remote view, please refer to the 'Remote Viewing' guide.

Once the DVR has been added to the network there are different methods to view the system remotely:

**Smart-phone APP** (IOS/Android)

**PC/Laptop Software:** CMS (Central Management Software) that is supplied on the CD supplied with the DVR (Windows compatible)

**Web Browsing:** Internet Explorer (Windows / Internet Explorer)

**NB. As with all networkable devices, ESP are unable to guarantee that every device will be compatible with the DVR and software supplied. Specific models of phone, tablet or other device, the hardware it contains, the service provider, the types of data services offered and specific phone / device plan will all affect the performance of PC / mobile device for remote access to the DVR.**

## SUPPORT GUIDE

In the event of trouble with the system please follow the help guide.  
If further problems persist please contact the installer / supplier.

### **The DVR will not boot up normally**

- The power supply is not correctly connected / switched On
- The incorrect power supply is being used
- The power supply is not producing the required voltage
- Disconnect any other devices connected to the power supply / DVR to identify external device trouble

### **Connection issue with the monitor**

- The monitor cable is not correctly connected or is damaged
- The incorrect power is applied to DVR / Monitor
- The correct input channel has not been selected on the monitor
- The correct resolution has not been selected in the DVR's **GUI Display** menu
- Connect a temporary test monitor to adjust the DVR's **GUI Display** menu

### **There are no cameras displayed on the monitor**

- The camera power supply is not correctly connected or damaged
- The camera signal cable is not correctly connected or damaged
- Try another channel input
- There is a connection issue with the monitor

### **I cannot find the video files in Playback mode**

- Recording did not take place in the specified time range
- The recording parameters have not been programmed correctly / switched off
- Hard drive has been overwritten
- Hard drive cannot be detected

### **Video files not found in Playback mode**

- The recording parameters have not been programmed correctly / switched off
- Hard drive has been overwritten
- Hard drive cannot be detected

### **DVR cannot detect hard disk**

- The DVR's power supply is not correctly connected or damaged
- The HDD has not been connected correctly
- An incorrect HDD has been installed

### **Network connection to DVR is not stable**

- Network is not stable
- DVR is not networked correctly
- Incorrect network details have been entered in the remote viewing platform
