Island hoods

Aluminose Touch Control

Aluminose's simplicity of design allows it to blend with every style of furnishing. This elegant island hood comes in three versions: the luminosity of aluminium is combined with either glass, silver or black, to harmonise perfectly with your kitchen, whatever the style.

Aluminose Light Soft

For the controls of your Aluminose hood, you can choose the backlit "light soft" system or technological touch control. The Optimised Aspiration System fitted to all the hoods in the collection provides the ideal synthesis of aspiration efficiency and noise reduction in an incredibly efficient compact filter.

Antartica Touch Control

With Antartica, the hood becomes a leading character. The refined glass arc of this splendid island hood effortlessly dominates the interior of the room, creating an atmosphere rich with personality.

Atlantica's style is rigorously linear and functional. Its stainless steel frame hovers on a slim leaf of glass, surrounding the central body with light and air. The backlit light soft push-button controls are a discreet but significant presence, allowing all the operations to be run simply and intuitively, while four halogen lamps guarantee excellent illumination of the cooking area.

Frame Light Soft

Frame was conceived to harmonise with the spaces of the domestic interior, and for people who appreciate its elegant contribution to the kitchen environment. This island hood's extraordinary performance endows your kitchen with the airy and relaxing atmosphere you've always wanted.
