1 SELECT THE MOUNTING LOCATION

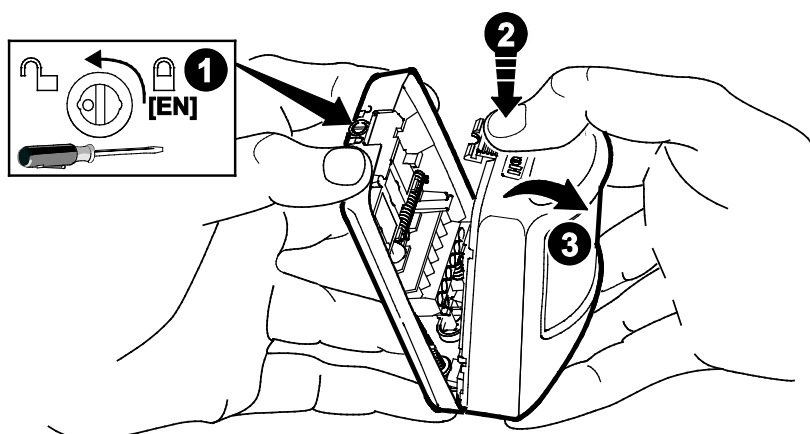

Mounting location guidelines:

- The optimal range is obtained at a mounting height of 2.3 m (7' 6").
- Allow a clear line-of-sight to all areas to protect.
- Do not directly face windows.
- Avoid close proximity to moving machinery, fluorescent lights and heating/cooling sources.
- For use in applications with pets up to 45 kilograms (100 pounds).

[EN] = approved installation.

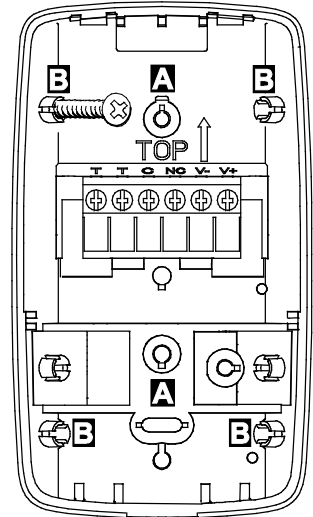

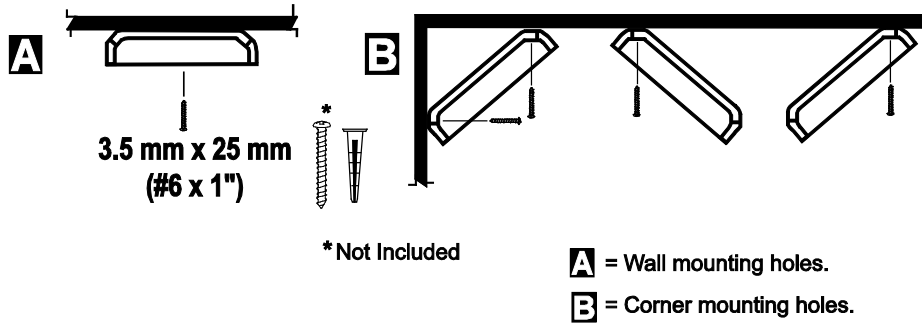

2 OPEN THE SENSOR

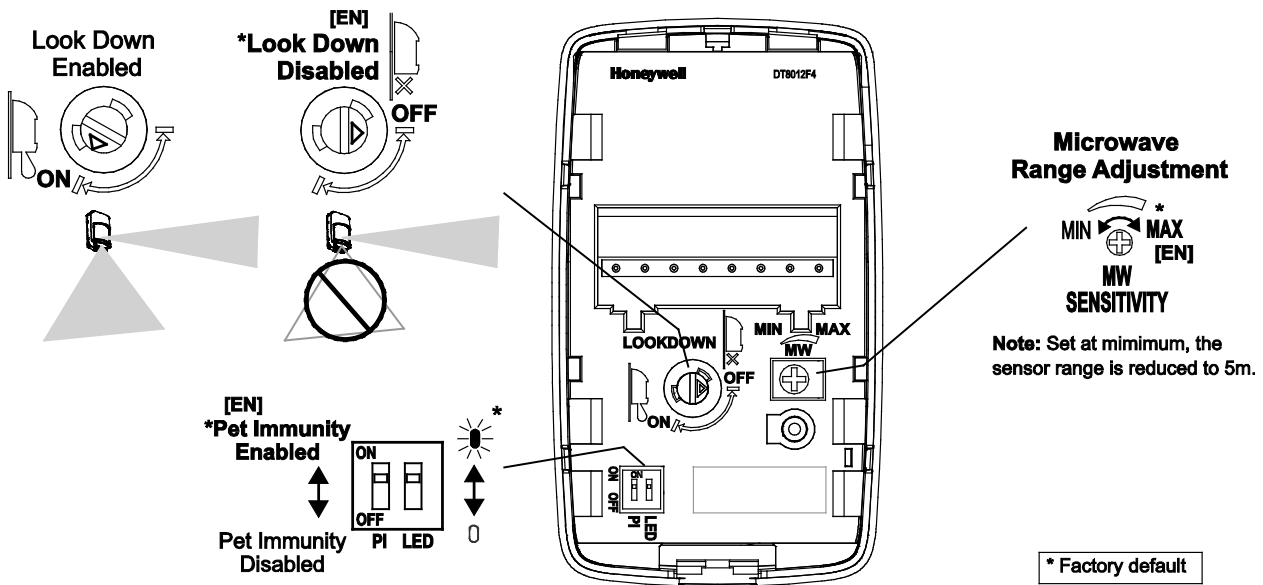

1. Turn the arrow to point to the Unlock symbol.
2. Press firmly on housing latch.
3. Gently separate the front and rear housing.

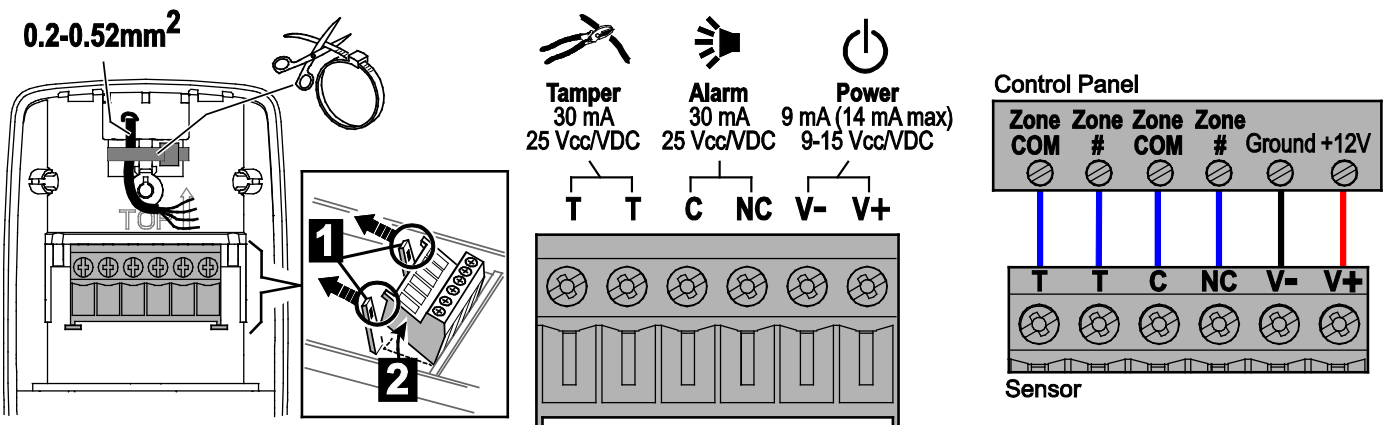

3 MOUNT THE SENSOR

WALK TEST THE SENSOR AND ADJUST AS NEEDED.

LED	Power Up	Walk Test	Normal	Trouble
Red	Slow Blink	ON Alarm	ON Alarm	Fast Blink
Yellow	OFF	ON Microwave	ON Microwave	OFF
Green	OFF	ON PIR	ON PIR	OFF

1. Close the sensor and apply power to the sensor. Initialization is complete when the LED stops flashing slowly (about 30 seconds).
2. Walk through the detection area and observe the LED.
3. Adjust the microwave range as necessary to meet installation requirements.

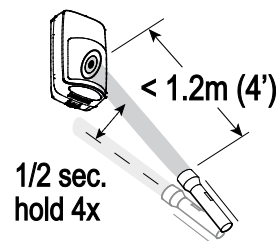

Walk test mode is active for 10 minutes, then automatically exits test mode, disables the LED and enters normal operation mode. For an additional 10 minute walk test, enable walk test mode again with the flashlight feature:

Note: During power up and walk test modes the LED is active regardless of the LED Enable/Disable DIP switch setting.

Flashlight Feature:

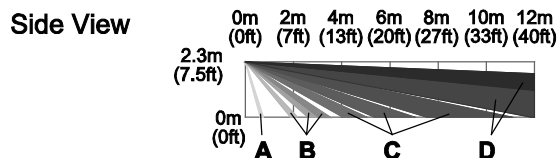

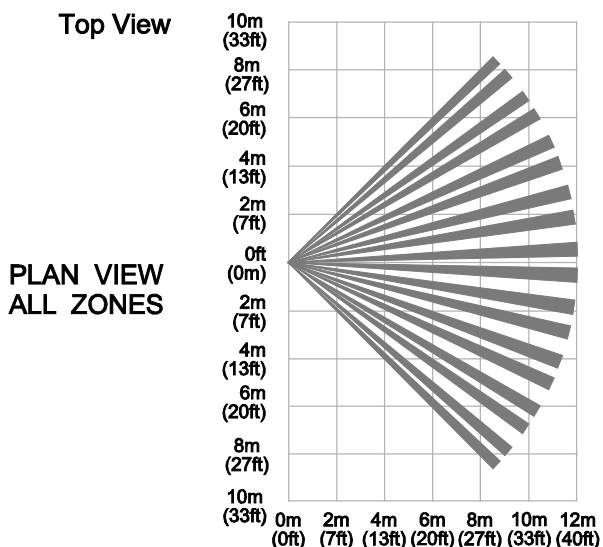

1. Use a flashlight with a bright light beam, and stand within 1.2 m (4') of the sensor.
2. Swing the light beam past the sensor lens 3-5 times, holding the beam on the lens for 0.5 second each pass.

The flashlight feature is only available for the first 24 hours after the first power up.

TROUBLESHOOTING

	NORMAL	TROUBLE*
		Self-Test Failure ¹
Alarm Relay	Closed	Open
Red LED	Off	Flashing

*TROUBLE CONDITIONS:

¹ Self-Test Failure conditions:

- Microwave supervision failure: The sensor is operating in PIR mode only.
- PIR self-test failure: The sensor is disabled.
- Temperature compensation failure: The temperature compensation is disabled.

Depending on the Trouble condition, take the following corrective actions:

- Verify the power supply is sufficient (at least 9V at the sensor).
- Cycle power to the sensor.
- [Walk test](#) the sensor.

If the Trouble condition does not clear, replace the sensor.
