Bioforce 12000UVC

Bioforce: the market leader's design innovations preserved

The well-established strengths of Bioforce are still prominent in the latest version and mean that, as a pressurised filter, the product is ideal for pond keepers who want ease of use, clear water and a filter system hidden from view:

Filtration Performance

Bioforce is a pressurised system that means a smaller, less obtrusive container size is needed and it can be buried next to the pond out of sight. Pressure also means that filtered water can travel up to the top of a waterfall without the need to be placed at the same high level. Standard equipment in Bioforce includes both a UVC and biological filtration capability; clearwater is therefore guaranteed when the correct size product for the pond is used.

ecoclear™ UVC

The Complete Filtration System for clear and healthy pond water

Ecoclear is a combination of new Bioforce UVC and our best-selling Titan solids handling pump, designed specifically for moving water to a filtration system. Because of this UVC capability, in the correct size pond Hozelock Cyprio guarantee Clearwater.
