

The clip has been designed to instantly replace a broken thread or lug, on the inside of metal UK electrical back boxes. After removing all snags from the inside of the back box, the clip simply pushes on with ease, and due to the tensioning and calibration of the clip, it will remain firmly and securely in place.

By having this small, lightweight product in their toolbox, your customers could save the arduous and time consuming task of ripping out the problem box and prevent the added expense of re-plastering, re-tiling, re-painting etc

**1. ISOLATE POWER,**  
then remove damaged thread,  
along with all snags and  
straighten box

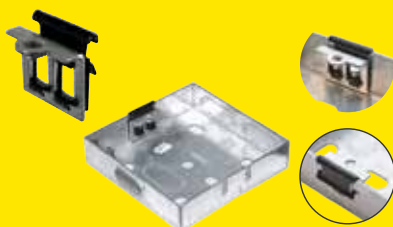

**2. Locate and push the  
Back Box Repair clip into  
place, DO NOT  
HAMMER/STRIKE**

**3. Mount and reattach the  
face plate, DO NOT OVER  
TIGHTEN!**
