

LTMS

Microwave Sensor with Corridor Function Add On Module

This microwave sensor with PWM output ensures smart and efficient lighting control. It detects motion reliably, even through walls, glass, or thin materials, and offers adjustable range, time delay, and daylight sensitivity. Ideal for energy-saving systems, it seamlessly integrates with dimmable LEDs, ensures optimal efficiency by activating lighting only when needed, reducing energy consumption and extending the lifespan of connected devices.

The corridor function with 10% & 30% step dimming provides continuous low-level illumination for safety and convenience, increasing brightness only when motion is detected.

Compatible with: Polo LTPCCT, Galaxy LTG1CCT, Galaxy LTG2CCT and LTDCB18CCT Die-Cast Bulkhead

Features & Benefits:

- 12VDC input, PWM dimming output, daylight sensor built-in.
- Tri-level dimming control with corridor function.
- DIP Switch setting.
- Built-in sensor function override.
- 5 year warranty.

WIRING DIAGRAM

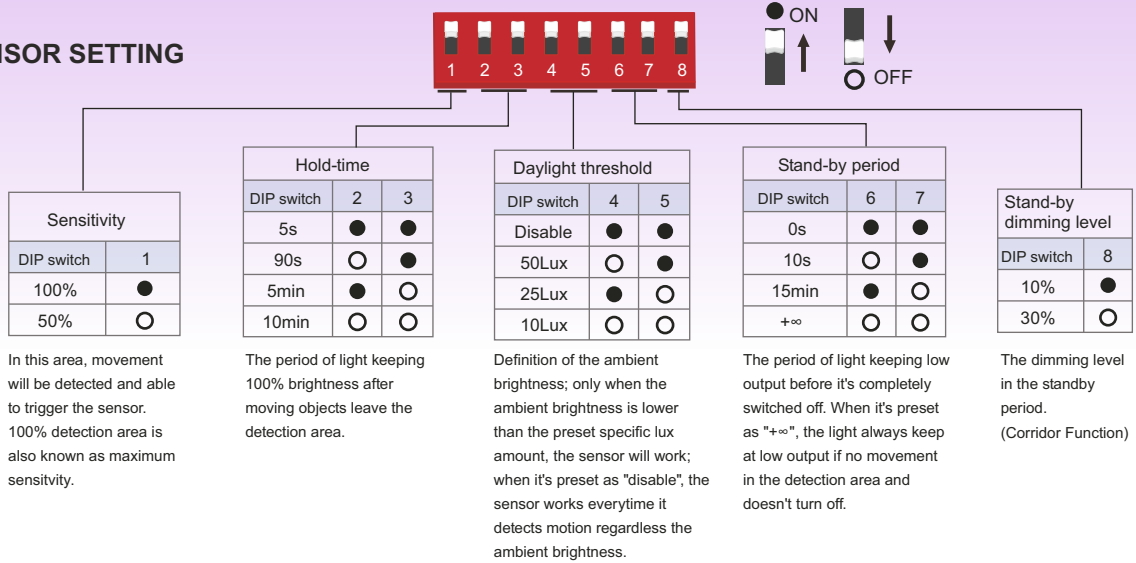

Technical Specifications:

Operating Voltage:	12VDC	Stand-by Period:	0s/10s/15min/+∞
Operating Current:	22mA	Stand-by Dimming Level:	10% / 30%
Output:	10V PWM	Mounting Height:	Max. 6m (Ceiling Mounted)
Microwave Frequency:	5.8GHz±75Mhz	Detection Range:	Radius 6m (Ceiling Mounted)
Microwave Power:	<0.3mW	Operating Temperature:	-35°C ~ 70°C
Sensitivity:	100% / 50%	IP Rating:	IP20
Hold Time:	5s/90s/5min/10min	Size:	LxWxH: 61.5x25.5x14mm
Daylight Threshold:	Disable/50Lux/25Lux/10Lux	Warranty:	5 Years

SENSOR OVERRIDE FUNCTION

Sensor Function: Override & Enable

1. With the light powered on, turn off for 2s and turn on for 2s, repeat 3 times to disable the sensor. The light will stay on 100% for 4 hours.
2. After the light stays on 4 hours, the sensor will be enabled automatic, and light will work in sensor mode.
3. User can switch OFF/ON the light one time to enable the sensor during the 4 hours mode.
4. The sensor will turn off the light and turn on when it detect motion if sensor mode was enabled.

DAYLIGHT PRIORITY

Thanks for the Dual-PD technology, the sensor can tell the difference between natural light and artificial LED light. The sensor will turn on your light fixtures when the ambient light is lower than the setting value even if no motion was detected. When the ambient light is up to the setting value, the sensor will switch off the light fixtures even if there is still motion.

NOTE: The Lux-on effect takes effect only when stand-by dimming period is set to +∞.

Note: Lux-On sampling time:10s
Lux-Off sampling time:10s
Lux-On function takes effect only when standby dimming period set at +∞.
