

Provider of affordable Telephone Systems for the home or office

# Orchid Telecom

# Orchid Telecom

Orchid Telecom bring telephone systems to the small office environment that are affordable, easy to install and easy to use.

A phone system is probably the most important communication device in any business allowing telephone lines to be shared between multiple employees, saving money and creating clear communication links between your business and it's customers.

The 206, 308 and 416 models give you all the functionality you would expect from a traditional Telephone system such as transferring calls, putting calls on hold and music on hold.

The next level would be to have a Key System with Key phones, Models KS308 and KS416. These allow companies to have 1 or 2 dedicated staff to answer calls and forward them to the right person, the traditional receptionist position. The key system with a key phone gives the operator a visual indicator of which lines and extensions are ringing or busy and allows multi call holding and transferring.

Accessories
