# Fan Control
風扇調速掣

WIRING DIAGRAM　　　　　接線圖

Clipsal fan controller is a solid state unit, designed to provide smooth speed variations from full to slow on most fans. Fan speed can be dialed to suite any condition. Full speed for efficient exhaust of stale air or stream in kitchens and bathroom. Otherwise, dialed down low for constant, quiet circulation and change of fresh air.

Any number of fans may connect in parallel up to total loading of 400VA. Only similar types of fans should be connected in parallel to minimize the possibility of resultant variable speeds.
