Instant electric hot water tap

Mains cold water

Ideal for

- Bathrooms
- En-suites
- Utility rooms and other domestic uses...

The Instant Electric Hot Water Tap is a direct replacement for standard mixer taps.

NEW IDEAS

- Instant hot water
- Easy installation
- Simple and economical

Suitable for all cold water systems and for a variety of applications including renovations, refurbishments, under staircase WC and garage conversions. Hot water is delivered instantaneously at point of use with no requirement to store the water, minimising energy wastage and saving money.

- **Instant hot water** Designed for hand washing where a connection to a hot water feed is unavailable.
- **Easy to install** Designed with the installer in mind, the tap only requires a connection to a standard 3/4" BSP cold water supply and an electric feed, making it suitable for installation just about anywhere.
- **Simple and economical** Easy to operate, point of use electric tap only heats the water required for hand washing, saving energy and money.

How it works

1. Connect to a cold water feed
2. Adjust the desired temperature with the lever
3. Cold water flows..
4. Water flows
5. Hot water..
6. Ready for hand washing

Suitable for direct connection to a 13 Amp plug or can be wired into a fused spur*

*We recommend this is fitted by a qualified installer
