Fig.1

INTRODUCTION

This guide contains all the necessary fitting instructions for your Unichrome Thames monobasin tap.

Note: The Thames monobasin tap is suitable for use with single holed style basins only.

Please read this guide carefully before beginning your installation.

The tap installation must be carried out by a suitably competent person and in the sequence of the instruction book.

Care taken during the installation will ensure long life and trouble free operation from your tap.

DO NOT choose a position where the tap could become frozen.

Replacement parts can be ordered from Triton Customer Service (*see back page*).

WATER PRESSURE

This tap is suitable for high water pressures only and should be fitted in accordance with Water Regulations.

Pressure range – 1 bar to 5 bar

COMPONENTS

The tap set comprises of the following:

- 1 Monobasin tap
- 2 Chrome collar
- 3 Rubber seal
- 4 Horseshoe plate
- 5 Stud
- 6 Retaining nut
- Steel braided hoses (2 off)
- 7 Plunger control rod
- 8 Fixing block
- 9 Plunger
- 10 Upper waste outlet
- 11 Upper silicon seal
- 12 Lower silicon seal
- 13 Lower waste outlet
- 14 Control lever

Check that all parts are correct. **(fig.1)**

INSTALLATION

WARNING!

The tap must not be positioned where it will be subject to freezing conditions.

DO NOT use jointing compounds on any pipe fittings for the installation.

Fitting the tap

Screw the stud into the hole in the base of the tap unit and secure. Fit the steel braided hoses into the hot and cold inlets (**fig.2**) and tighten to secure.

Place the chrome collar onto the recessed opening on the basin. Feed the braided hoses through the collar and opening in the basin and place the tap assembly in place. Make sure the tap and collar sit correctly on the basin.

Slide the rubber seal and horseshoe plate over the stud and secure the tap assembly in place using the nut provided (**fig.3**).

Note: DO NOT overtighten the nut as this may damage the tap unit and basin.

Fitting the waste unit

Take the waste assembly apart, as shown in (**fig.4**).

Insert the control lever through the opening in the side of the lower waste outlet. Fit the retaining nut and tighten. Finger tight should be sufficient.

Slide the silicon seal onto the upper waste outlet and fit the lower silicon seal onto the lip on the lower waste outlet (**fig.5**). Place the upper waste fitting into the drainage hole in the basin. Screw the lower waste outlet into the upper waste outlet — **DO NOT tighten at this stage.**

Align the lower fitting such that the control arm faces towards the rear of the basin and secure.

Slide the top half of the plunger control rod through the opening in the rear of the tap unit. From the underside of the basin, screw the lower section of the control rod into the top rod and tighten.

Push the control lever down and then slide the fixing block onto the control lever. The fixing block is designed to move along the lever to allow for correct positioning (**fig.6**).

Slide the fixing block so that the control rod can fit through the block (**fig.7**). Tighten the screw to secure the plunger control rod.

Place the plunger in the waste assembly. To alter the plunger gap, remove the plunger and adjust the screw in the plunger base (**fig.8**).

FINISHING THE INSTALLATION

Important: Before completing the connection of the water supply to the inlets of the tap, flush out the system to remove any debris in the pipework. This can be done by connecting a hose to the pipework and turning on the mains water supply long enough to clear the debris to waste.

Connect the steel braided hoses to the hot and cold supplies using standard 1/2" BSP tap connectors.

Connect the waste outlet to standard 1 1/4" waste trap.

OPERATION

The tap has a single handwheel control for flow and temperature.

To turn the tap on, tilt the control upwards (**fig.9**). To stop the flow push the control down. Adjust the temperature by turning the control left or right.

To close the waste gate pull the control rod at the rear of the unit upwards (**fig.9**). This will drop the plunger into the outlet. To open the waste gate push the rod down.

CLEANING

IMPORTANT: DO NOT use abrasive or solvent cleaning fluids. The tap unit should be cleaned using a soft cloth and warm water. Any stains should be removed using washing up liquid.

SPARE PARTS

Description	Part No.
40mm ceramic cartridge	83308110
Complete handwheel	83308130
Complete anti-splash tap	83308070

TRITON STANDARD GUARANTEE

Triton Plc guarantee this product against all mechanical defects arising from faulty workmanship or materials for a period of five years for domestic use only, from the date of purchase, provided that it has been installed by a competent person in full accordance with the installation and operating instructions.

Any part found to be defective during this guarantee period we undertake to repair or replace at our option without charge so long as it has been properly maintained and operated in accordance with the operating instructions, and has not been subject to misuse or damage.

This product must not be taken apart, modified or repaired except by a person authorised by Triton Plc. This guarantee applies only to products installed within the United Kingdom and does not apply to products used commercially.

This guarantee does not affect your statutory rights.

What is not covered:

- 1** Breakdown due to: *a)* use other than domestic use by you or your resident family; *b)* wilful act or neglect; *c)* any malfunction resulting from the incorrect use or quality of gas or water or incorrect setting of controls; *d)* faulty installation.
- 2** Repair costs for damage caused by foreign objects or substances.
- 3** Total loss of the product due to non-availability of parts.
- 4** Compensation for loss of use of the product or consequential loss of any kind.
- 5** Call out charges where no fault has been found with the unit.
- 6** The cost of routine maintenance, adjustments, overhaul modifications or loss or damage arising therefrom, including the cost of repairing damage, breakdown, malfunction caused by corrosion, furring, pipe scaling, limescale, system debris or frost.

Replacement Parts Policy

Availability: It is the policy of Triton to maintain availability of parts for the current range of products for supply after the guarantee has expired. Stocks of spare parts will be maintained for the duration of the product's manufacture and for a period of five years thereafter.

In the event of a spare part not being available a substitute part will be supplied.

Payment: The following payment methods can be used to obtain spare parts:

- 1** By post, pre-payment of pro forma invoice by cheque or money order.
- 2** By telephone, quoting credit card (MasterCard or Visa) details.
- 3** By website order:
